

What is?

ULTRASOUND is a national project, in the context of the call of the Avanza Plan, within its program Digital Contents, and whose main aim is the creation of a social multichannel platform of communication and training in ultrasound scan for the health professionals in Primary Healthcare.

The project allows new ways for generation of contents (through the collaboration as well) using different means (multimedia) and applications (smartphones and tablets). It also allows new possibilities of access, control, and evaluation of the training, to which we have to add the offer of specialized and relevant information for the right decisions taking of professionals.

Objectives

The main objective of the project is the creation of a social multichannel platform of communication and training in ultrasound scan for the health professionals in Primary Healthcare. The online platform USPH (UltraSoundPrimaryHealthcare) will give response to the following needs:

- Training in the use of ultrasound scanners in Primary Healthcare.
- Training and updating in diagnosis of the image in AP.
- Boost of the discussion, the communication and the spreading among peers through the development of the differential digital contents in which we can include simulation, creation of a repository of ultrasound images and medical cases.
- Development of specific applications for use of the platform in digital devices as smartphones or tablets.

For who?

The platform USPH is addressed to healthcare professionals in Primary Healthcare.

ITACA-TSB in ULTRASOUND

Itaca-TSB is the responsible of the platform development in the context of the project.
